

SiCam RealTime LSC

Lumber Size Control Systems

APPLICATION: RESAW

MPP Scanner Top View Configuration

Designed for Single, Twin and Quad Bandsaw Saw style machines.

- Monitor top edge size of each piece
- Optimize cutting tools change cycles
- Predict repair & maintenance cycle trends
- Tune optimization & controls
- Manage on-size performance
- Minimize manufacturing variation
- Reduce target sizes

The right technology scanning immediately after the machine center delivers maximum accuracy, reliably tracks pieces from each sawline separately and identifies misbehaving components fast reducing the gap between the occurrence and detection of events of miss-manufacturing.

- Premium solution approach
- Top grade components & materials
- The right scanner for each application
- Professional training services
- Unparalleled customer support
- Competitive pricing

SiCam Systems

Premium Size Control

Installed Applications

Canter Quad Lumber Size Control
 Canter Twin Lumber Size Control
 Small Log Line Lumber Size Control
 Headrig Lumber Size Control
 Resaw Lumber Size Control
 Gang Vertical Lumber Size Control
 Gang Horizontal Lumber Size Control
 Edger Single Piece Lumber Size Control
 Edger Multiple Piece Lumber Size Control
 Trimmer Presort Lumber Size Control
 Planers Infeed & Outfeed Lumber Size Control
 Fence Gauge Multi-Stage Verification
 Lumber Length Gauge - Random
 Lumber Length Gauge - Stud
 Lumber Length Gauge - PET
 Sorter Thickness & Width Gauge
 Veneer Thickness Gauge
 Panel Thickness Gauge
 Bandsaw Deflection Monitoring
 Log-Cant Opening Face Verification
Mill-Wide Size Control Solutions

Sensing Technologies Supported

MPP Multi-Piece Profile Scanners
 Single Point Laser Range Sensors
 Long Range Laser Range Sensors
 Inductive Proximity Probe Sensors
 Trimmer Optimizer Integrations

- Comact
- USNR
- CNM

Right Sensor Technology for each Application

PLC Integrations & Controls Supported

Allen Bradley – Modicon – Siemens
 Feed Speed Control
 Off Size Fatal Stop Control
 Piece Diversion Control
Send & Receive Information for each Piece

Alarm Options

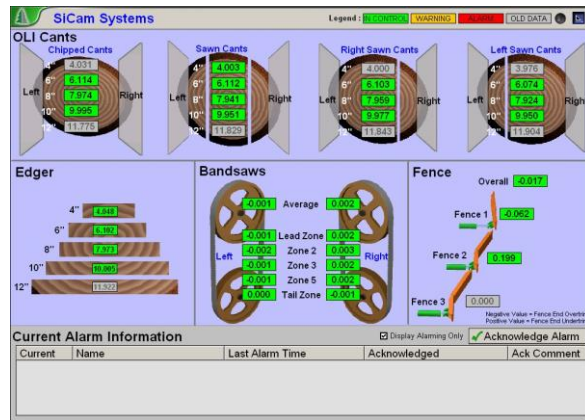

Machine operator pop-up alarms
 Site based pager systems
 Reader scoreboards
 PLC message board integration
 Automated text messaging & email
Right Information, Right Time to the Right People

Performance

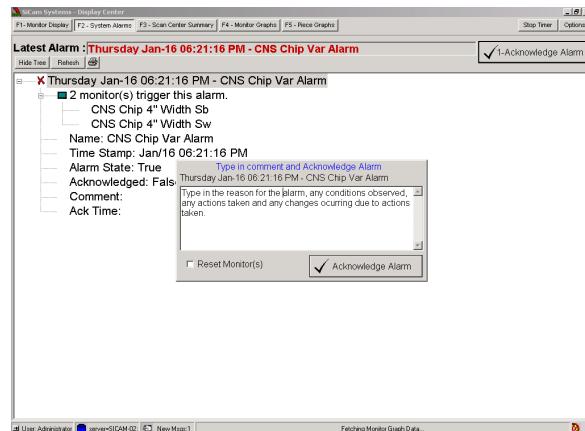

Accuracy +/- .005" (1/8mm) green lumber
 Accuracy +/- .0025" (1/16mm) planed lumber
 Unlimited number of boards
 Feed speeds above 2500 ft/min (750m/min)
High Performance Tools for High Performance Teams

Benefits

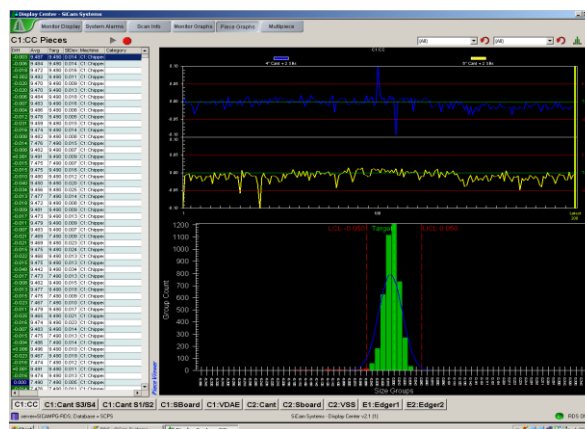

Improve lumber recovery
 Increase production
 Improve grade out turn
Maximize Profitability

Friendly User Interfaces

Reliable Alarming & Tracking Tools

Powerful Reporting Tools
