

SiCam Systems Professional Services

SiCam Systems' Professional Services assist our customers to maximize the return from their fiber recovery and machine reliability improvement initiatives. Our results-based approach is to work with the operations team to identify and implement low-cost, high-payback opportunities to improve fiber recovery, product quality and throughput on their machines to assist our customers to maximize the financial impact from the SiCam technology.

SiCam Workshops

Objective: To teach the basics of lumber size control to the lumber manufacturing team, to ensure they understand the importance of the close management of product dimensions, and to help them gain the will and the skill to use lumber size control technology effectively to maximize machine reliability, fiber recovery and product quality.

SiCam System Training

Objective: To teach the manufacturing team to apply process management technology to control product dimensions, to immediately detect upset conditions, to understand the information generated, to troubleshoot the root causes of those upset conditions, to make the best operational decisions to maximize machine reliability, fiber recovery and product quality and to assist our customers to maximize the financial impact from the SiCam technology.

'Tell me and I'll forget.

"Show me and I'll remember.

"Involve me and I'll understand."

SiCam Project Services

Objective: To ensure that every SiCam Systems' technology project is delivered on time, on budget and as promised, that it is the premium product available in the marketplace, that the project is supported by the best services to assist our customers to maximize the financial impact from the SiCam technology.

The training that SiCam Systems Corporation provides makes all the difference to having a successful size control program. The sessions are geared towards line personnel and trades. The approach is fun, easy to follow, builds confidence in the technology and the methods and that gets people committed. The biggest benefit is that the entire team learns the skills they need to use the technology day in – day out. That's how our operation gets most from the system."

**Dan Bowes, Manager
Weyerhaeuser Canada**

"We saw such huge potential in the SiCam™ Leading for Quality workshop that we involved our entire organization. The result has our entire team focused on improving our business. We are extremely happy with the results".

**Greg Konkol, Owner
Konkolville Lumber**

"The workshop helped us engage in the process of improving corporate wide standards, ensuring that all of our people understand the concepts and perform to the best of their ability."

**Daniel Couturier, Manager
J. D. Irving, Limited,
Sawmill Division
Saint John, New Brunswick**
